**Fast, easy, profitable.**

# About Tottoli

**Tottoli GSM** - company that provides services on one of the dynamically developing markets - FMC convergence (unification of mobile and fixed connections).

The sphere of company interests covers business patterns for MVNO, IVR, VAS, Roaming and mobile banking.

The company focuses on integrated development, offering a client easy and understandable solutions in the field of telecommunication and mobile marketing.

Our main goal is to offer tools and technologies that will allow to create optimal patterns on the basis of VOIP and GSM.

# Mobile Virtual Network Operator

The service is based on the combination of GSM-connection and VoIP-telephony. Exclusive roaming and direct agreements with IP providers allow to create various business-patterns.

Towers of GSM Network are almost world widespread, so mobile connection is available everywhere. VoIP technology makes it possible to use already existed infrastructure and slash out the cost of call for all directions.

Suggested MVNO / MVNE patterns are universal tools, by which you can develop high-tech business with minimum expenses. When creating your own business pattern, you will be able to use your own or our resources, and that allows to enter the market with minimal risks.

SIM-cards are compatible with all popular mobile phones and have different shapes: standard, micro and nano-SIM.

Our billing makes it possible to control all actions of a SIM-card and to receive statistic data in real-time mode. You will have an access to location, SMS, USSD, the data, and will be able to create groups and rate-plans for these groups.

Full MVNO focuses on corporate clients. It gives vast opportunities for integration of your infrastructure with ability to use FMC (usage of international short dial-up numbers inside the company).

**Fast:** Fill in the form or contact us.  
**Easy:** User friendly administrative panel.  
**Profitable:** Your own rates.

## Opportunities for operators

Tottoli business model is based on the need of subscriber to cut the number of SIM cards and make them easier to use, while maintaining access to services, and even more clear need for the operator to get a new Subscriber with minimum value of engaging, by offering a unique service. These very needs we serve with our cloud-based project. Functional platform provides two global interaction interfaces: "Operator (service provider)-Tottoli» and «Tottoli-Subscriber (service consumer)».

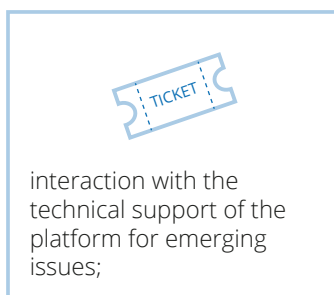

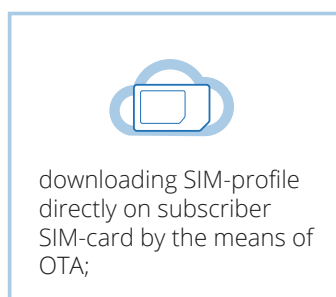

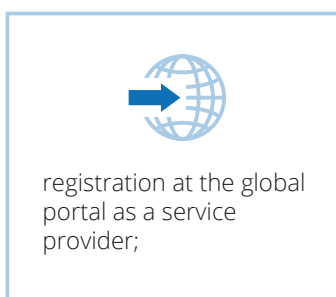

## How it works:

Downloading the link (not the profile, but just a link to it) to your own profile in cloud Tottoli, operator provides global access to its services for visitors worldwide.

Next step in the technological chain is the integration of the billing component. Tottoli is able to provide real-time access to the detailization and the withdrawals of the subscriber. Business model involves a single payment instrument to recharge a single personal account of the subscriber and the unified access to detail expenses for all installed profiles and statistics.

If we describe the algorithm entry into the service with the eyes of the operator, the result is an attractive, economical and innovative model of entering new markets:

For traffic providers

## Increase your traffic usage

Tottoli GSM works in the B2B sector with companies from all over the world. Our clients are different companies from banking, touristic and security sectors as well as those who are interested in arranging their own cooperate network. They have created their own mobile operators in order to expand their scope of activities and in order to maintain our service at a high quality we are looking for new traffic providers.

Tottoli GSM would be happy to start long term and mutually beneficial partnership with trustworthy traffic providers.
