FMC

(Fixed Mobile Convergence) is a service that connects mobile and office networks

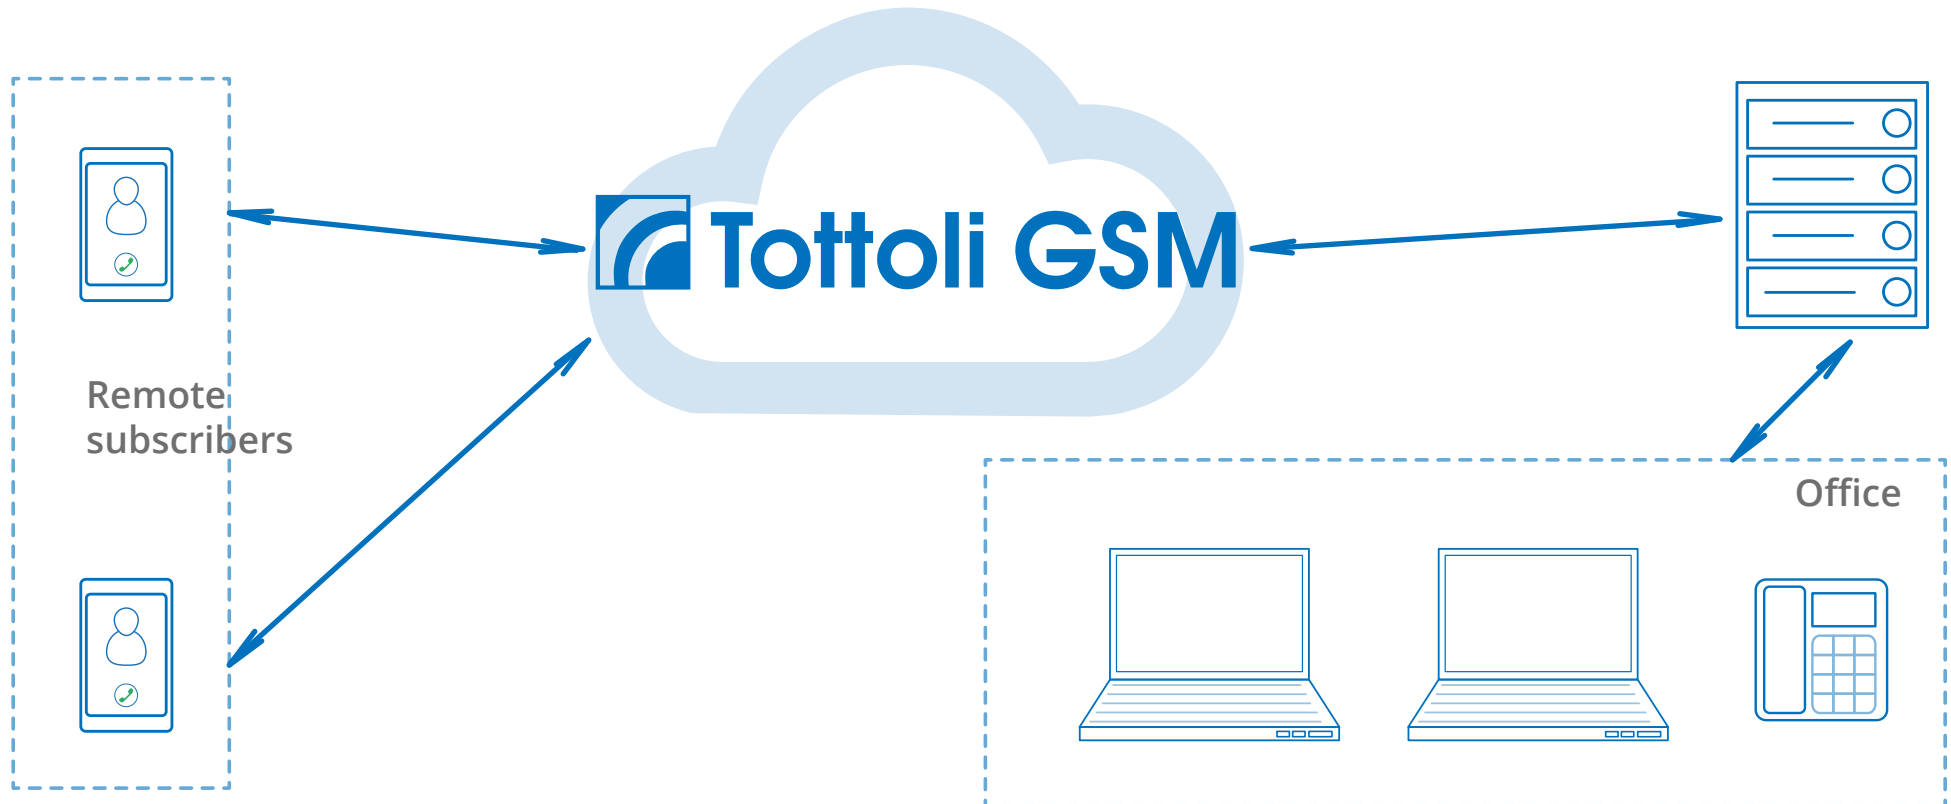

Using of **FMC** service is a topical question for the company if:

- There is an office network and staff with mobile phones
- There is an active cooperation between offices and distant employees
- There is a distributed network of company's branches (both within the country and in the world)
- There is a need to optimize communication expenses

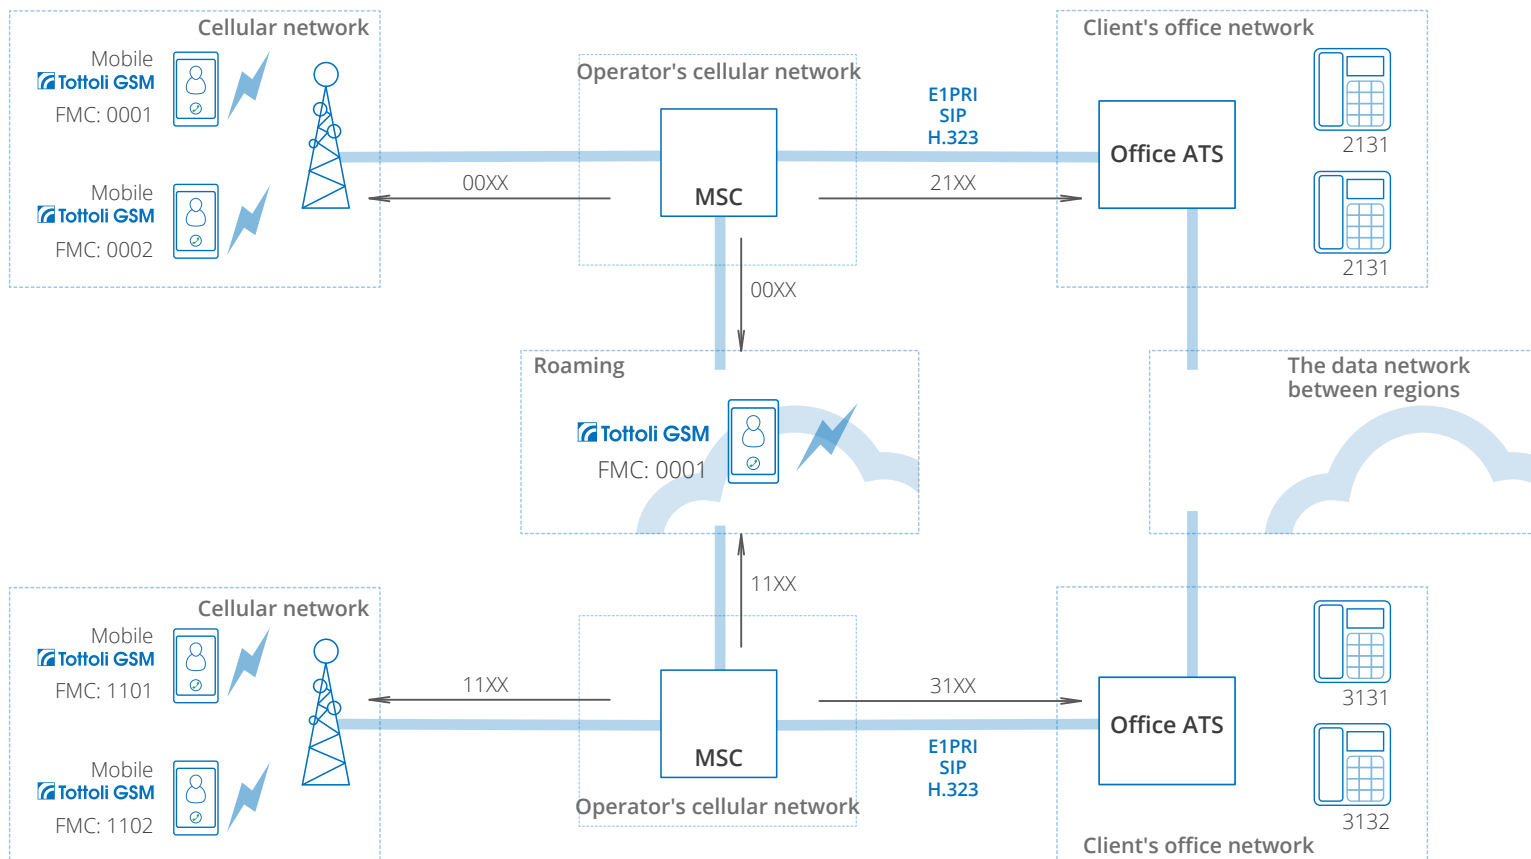

Solution: FMC based on the Tottoli platform

Package of FMC services

Connection of short numbers of fixed and office telephony (both within one office and some offices in different cities/countries) with mobile numbers of the employees in one network.

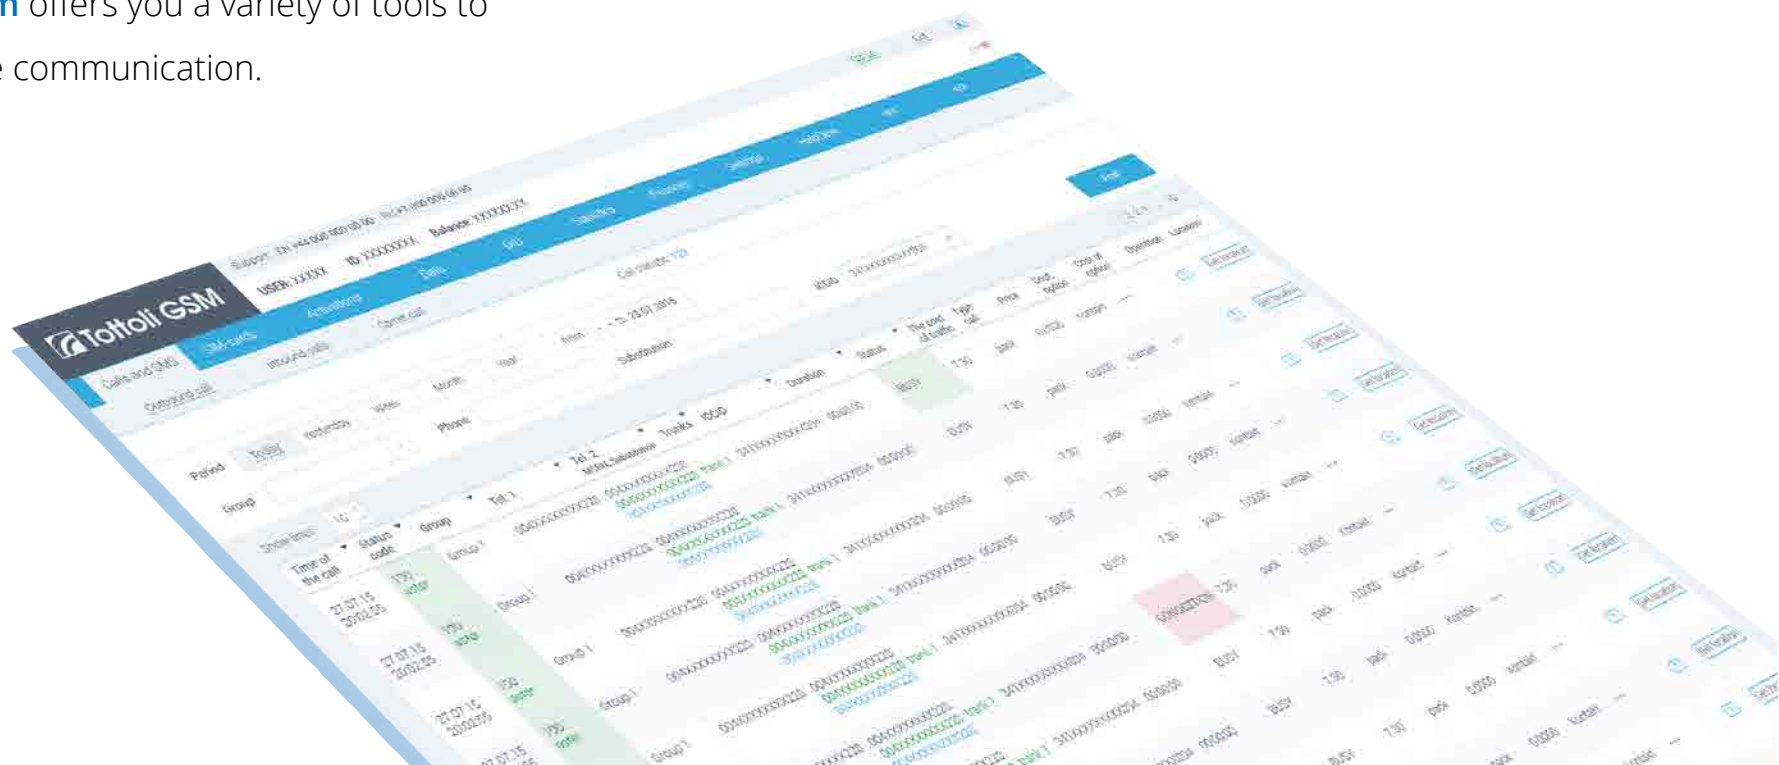

Package of services FMC

- FMC service package allows you to set a comfortable routing of calls through a single internal numbering
- Reduce communication costs due to GSM / IP convergence

Tottoli-GSM Platform

Depending on the special features of your business, **Tottoli-GSM platform** offers you a variety of tools to organize and manage communication.

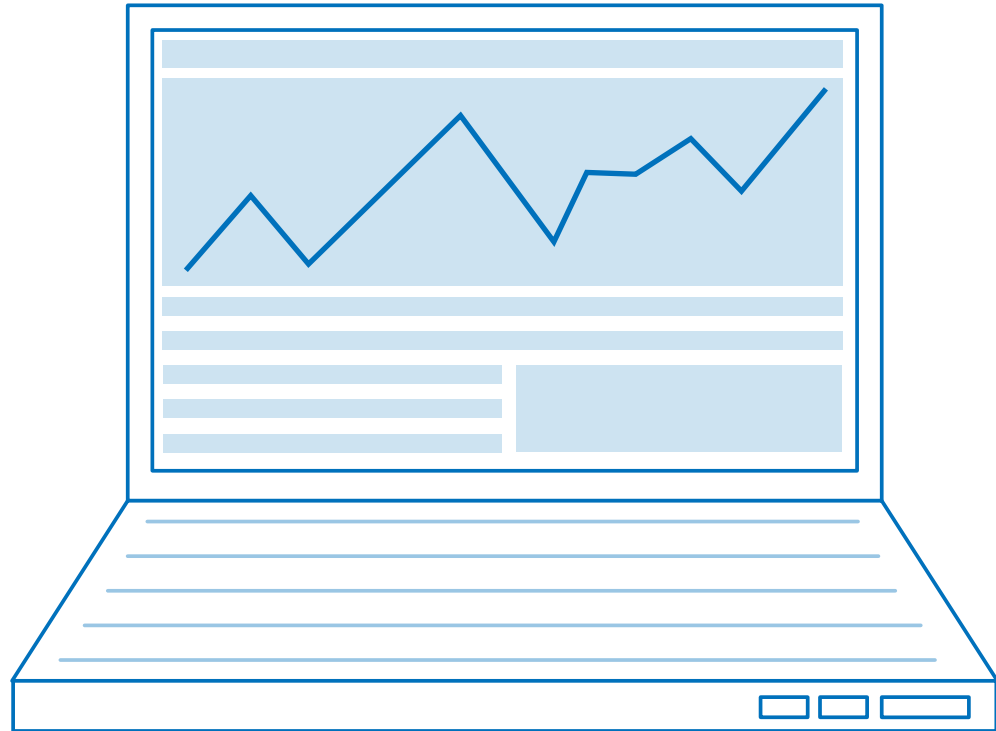

Tottoli-GSM Platform

Our platform can be easily integrated with existing office network using developed API

Tottoli-GSM Platform

A company-customer can use their own
